

### **7.1.2 The Institution has facilities for alternate sources of energy and energy conservation measures**

ILS Law College is deeply committed to energy conservation and actively encourages its students to adopt the same ethos. The classrooms are thoughtfully designed to maximize natural light and ventilation, reducing reliance on electricity. Solar panels have been installed for the hostels, providing hot water and minimizing the need for electric geysers. Additionally, solar panels power lights and fans, significantly decreasing dependence on conventional electricity sources. As part of its energy-saving measures, the college has implemented LED lighting in classrooms. Situated amidst green surroundings, the campus naturally maintains a cool and healthy environment, leading to reduced electricity usage, especially during winter when fans are used sparingly. To uphold its green initiative, students and faculty are urged to switch off lights and fans when not in use, contributing to overall energy conservation efforts. The institution remains committed to ensuring a clean environment and minimizing energy consumption.
